

Developed in conjunction with UK Airport Operators, our Airside Safety Awareness Training (ASAT) course covers the roles and responsibilities of employees working airside. Focusing on airside safety and procedures for dealing with an incident, this course promotes a safe working environment, by providing workers with the information and skills they need to work safely and efficiently.

## Efficient and Effective Safety Training

This course is based upon the Civil Aviation Publication (CAP) 642 document and represents safe working practices at airports. This course is recommended for all personnel who work airside, including those involved in ramp operations. Course content is a combination of guidelines and directives. Modules include:

- Traffic Rules
- Fire Prevention
- Danger Zones

By ensuring all students are aware of the dangers involved in working airside, the risk of related accidents is reduced, as is damage to aircraft and subsequent financial implications.

## Partnering with the experts

At Quadratica UK we are continually looking for ways to provide our customers with the best functionality, in the most economic format. Training can be expensive, and the quality of instruction can vary from trainer to trainer. Our online training courses deliver high quality training, every time.

Scheduling training for a large work force no longer requires the cost of training rooms, or taking staff off the floor. Our courses are available 24 hours a day, 7 days a week, so training can be scheduled around staff availability and convenience.

The home of web-based training - courses available world-wide 24 hours a day, 7 days a week

training that works

# Reducing Costs

To keep our clients' training overheads down, we have priced our courses by the unit – if only 2 people require training, our clients only pay for 2 units, whereas a certified instructor will charge the same amount whether they are training 2 or 20 people.

We provide training managers with the best possible tools to educate their security staff by continually developing ground-breaking technologies. Our products are designed with a strong focus on our customers' ever evolving needs and the shifting landscapes of the security industry.

## ASAT course overview

This course is recommended for all personnel who have, or require, airside passes or are involved with ramp operations or working airside generally.

When someone is employed by the airport, they are not only a representative of the company they are employed by, but they're also representing the airport itself.

There are many activities carried out at the airport in the airside environment, and it is imperative that students are aware of what these are and the impact they can have on the day-to-day running of the airport.

Once the training has been completed, each student will be required to take a multiple choice exam to confirm that they have understood the training and that they recall the most important rules and regulations of driving airside.

The Airport is responsible for the student being awarded their Airside Pass, once all certificates have been presented. ASAT is just one of many important courses that need to be taken in order to gain an Airside Pass.

## Lesson overview

**Lesson 1:** Airport Familiarisation

**Lesson 2:** Roles & Responsibilities

**Lesson 3:** Airside Safety Fundamentals

**Lesson 4:** Airside Safety Awareness

**Lesson 5:** Environmental Awareness

## Quadratica

Do you want the best training possible?

Quadratica provide the best on-line training systems in the world. Our track record is second to none and with over 18 years of experience, the Quadratica Team know what they're talking about. We have proven our systems are the best in market sectors such as aviation, major events and justice environments where failure is not an option.

Why do we do it?

It's simple. The team at Quadratica want to provide the best possible training, combined with excellent customer service. We know that being a provider of the best products and services will lead to a mutually beneficial relationship... and this is what drives us.

How do we do it?

We provide products that are second-to-none and we deliver proven technology to satisfy our customers' rigorous requirements. Our products are the best, the easiest to use, the most productive, offer the best functionality and are delivered ultimately in the most economic format with which our customers can train users resulting in the best possible outcomes.
